

ABSTRACT

A method and apparatus for delivering a plurality of medicaments in a single delivery vehicle for the management of co-morbid diseases, illnesses and conditions. The present invention provides a novel delivery process for many medicaments. Medicaments may be encapsulated and stored separately within a larger capsule until the time of ingestion, consumption, or the like. Benefits of the present invention include maintaining separation of distinct ingredients within a single capsule and the capability to control the time release of multiple ingredients within the capsule.
